

ROYAL GRASS®

Royal Grass® XPlay

safe and green

Perfect for

- Playgrounds
- Multifunctional sports fields
- Public play areas

Quality of grass fibres

Royal Grass® XPlay is made of extremely wear-resistant polyethylene fibres which can handle 4 times more load than standard artificial grass fibres, making them highly suitable for very intensive use. In addition, Royal Grass® is guaranteed to be 100% safe for people and the environment, even if you accidentally swallow it. The artificial grass fibres of Royal Grass® XPlay are manufactured on a unique extrusion line of Royal TenCate in the United States.

The strongest, most wear-free and safest artificial grass available. By far. That's what makes the XPlay the ultimate surface for playgrounds and sports fields; thanks to the fibres of superior quality that have been developed especially for this purpose.

Additional advantage

The XPlay can be used for safe playgrounds in combination with an underlay with fall cushioning.

Colour

Intense green

Installation advice

To give the grass maximum stability, it should be spread with special dried silica sand: approx 25 kg/m².

The result is a polymer that can hardly be split. A giant leap forwards where durability of artificial grass is concerned. Splitting fibres are the biggest wear problem for artificial lawns. Research has shown that the XPlay fibres can handle being thread upon up to 4 times better than traditional fibrillated fibres.
